Geo Place via API

Table of Contents

Overview

This article will cover how to retrieve data from the Geo Place table via the API.

Fetch a Geo Place Record

Parameters

- Cols
    - Specifies a list of fields that should be returned.

Example API Call

curl --globoff 'https://<--client site-->/api/rest/v2/geo_place/<--geo place id--
>?cols=["name","ancestry"]' --header 'Authorization: Bearer <--token-->'

Returned Payload

```
{
  "geo_place": {
    "id": 1088127,
    "name": "Bubanza",
    "ancestry": "1000000/7001242/7100025/7001630"
  }
}
```
